One system for the whole farm business.

Logi Farmz is a cloud ERP built in Uganda for farms, cooperatives and agro-processors: from the first acre planted to the audited annual report — with the simplicity your team will actually use.

Six modules, one login, one set of books.

Multi-farm & multi-organisation	**Works in UGX and USD**	**Approvals & audit trail**
Two-factor security	**PDF & Excel documents**	**Mobile-friendly, offline driver app**

What's inside

Farm

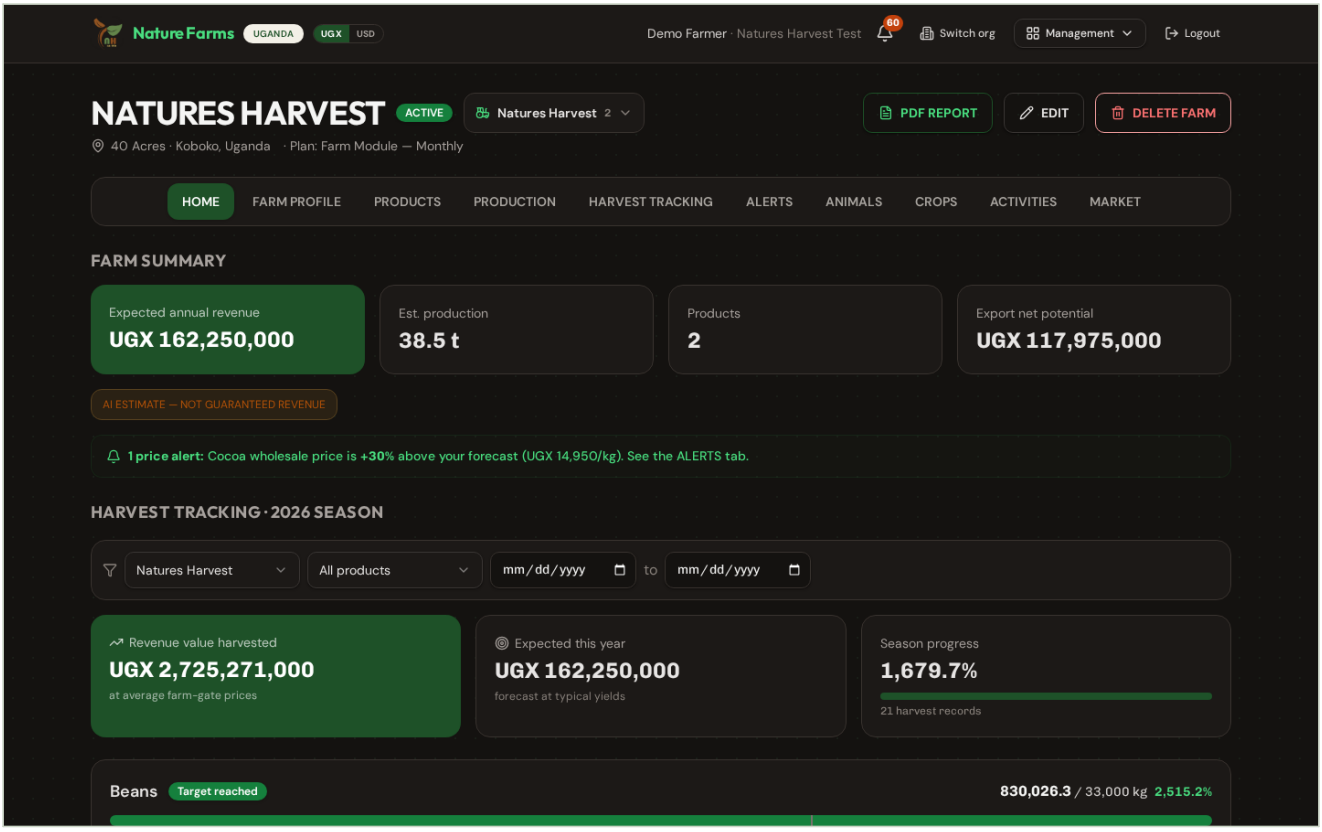

Farm profiles with Uganda location hierarchy and GPS, 100+ crops and 18 animal types, area allocation, harvest recording that feeds stock automatically, and an AI revenue forecast (conservative / expected / optimistic, domestic vs export) with price alerts.

Store & Sales

Stock from harvests, purchases and production; point-of-sale in kg or packages; cash and credit sales; customers with statements and held credit; suppliers with price history and scorecards; receivables in one view.

Finance

Double-entry books behind a simple interface: transactions, requisitions with approvals, invoices and credit notes with full change history, loans, journal and trial balance, balance sheet and board-ready PDF reports — every amount in UGX and USD.

Farm home — forecast, price alerts and harvest tracking for the season.

What's inside (continued)

HR & Payroll

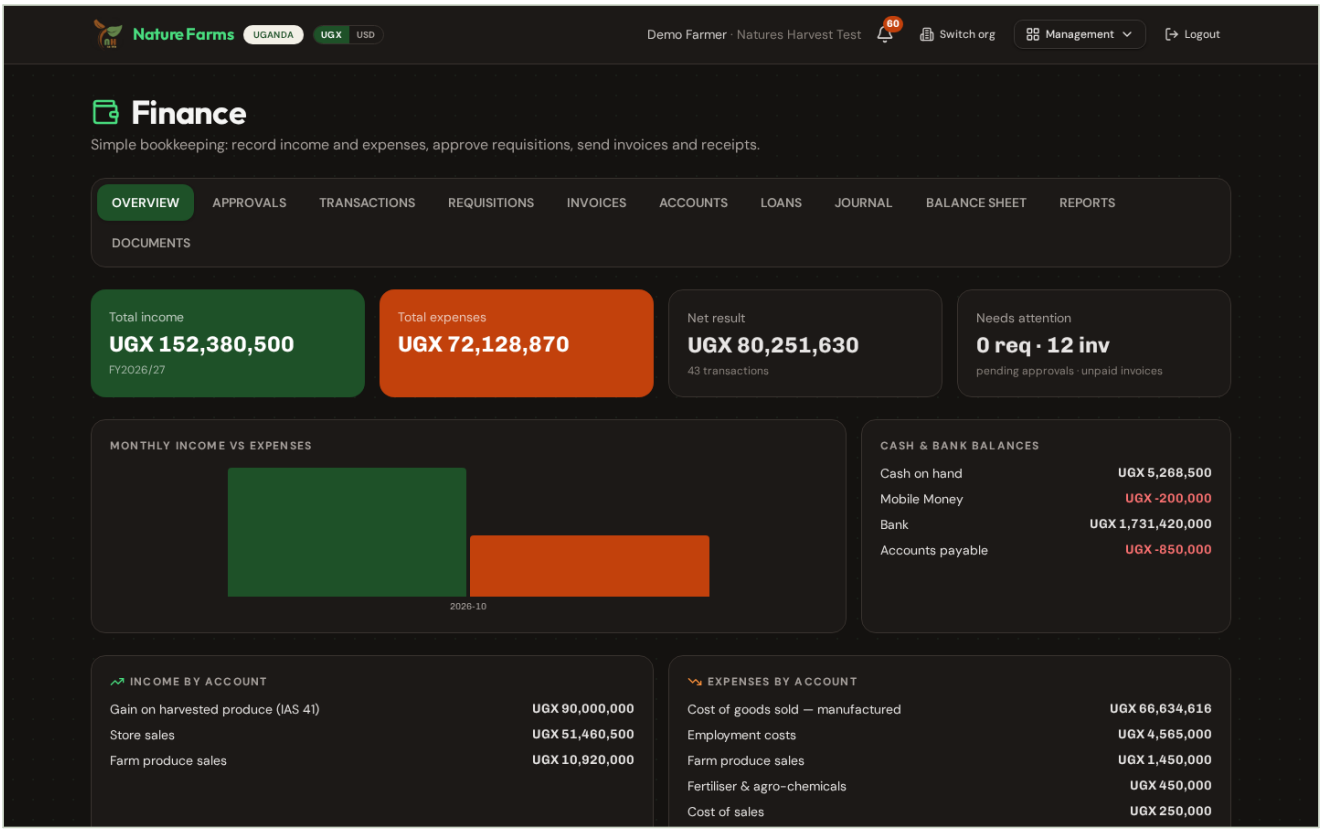

Staff, contracts and MOUs, daily attendance (also from a phone), overtime, Uganda PAYE/NSSF/LST, payroll runs that post to Finance and e-mail payslips.

Production

Cocoa processing from beans to bars: versioned recipes, a 5-step planner with stock reservations, factory orders with stages, operators and QC, batch labels with QR codes, batch costing and profitability by product and channel.

Logistics

Transport requests from sales, purchases and harvests; trips and dispatch; a driver phone screen with proof of delivery that works offline; fleet maintenance; carriers with invoice matching; delivery SMS and reports.

Finance overview — income, expenses, cash & bank balances and manufacturing ledger at a glance.

Built to be trusted — and to grow with you

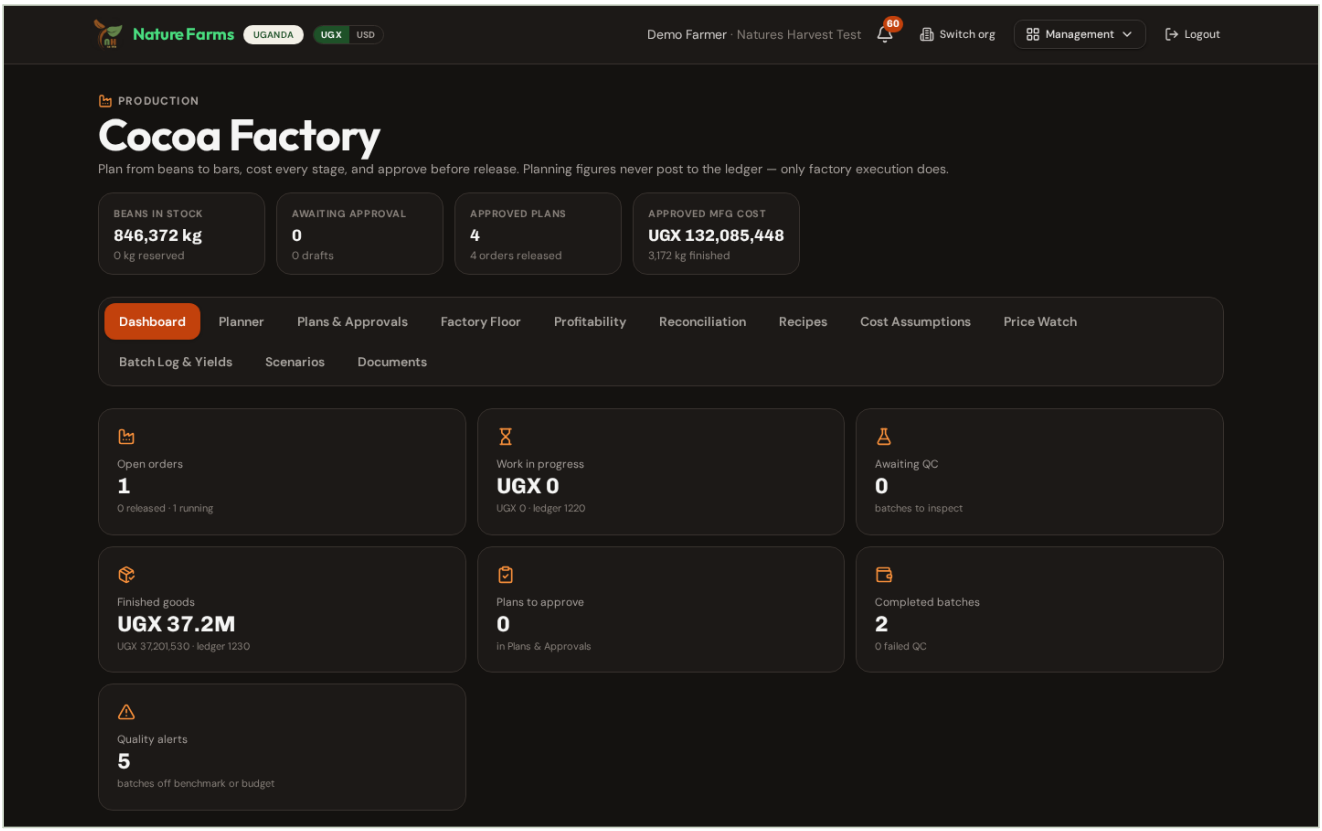

Security. Encrypted sessions, two-factor sign-in (optional per user, enforceable per organisation), per-device sign-out, sign-in location alerts, brute-force protection, and a full audit trail of approvals and changes.

Multi-tenant SaaS. Each organisation's data is isolated; owners can export everything as JSON at any time or schedule a deletion with a 7-day grace period. Designed and tested for 1,000+ organisations and farms.

Finance you can hand to an auditor. A central posting engine guarantees balanced, idempotent entries from every module; the trial balance always balances; every PDF shows UGX and USD at the rate on its date.

Documents & AI assistance. Upload any file and it is classified, summarised and filed; type what you are billing and the invoice lines are drafted for you. The AI never does the accounting.

Automation. Daily reminders for plan expiry, approvals, vehicle service and price changes; weekly margin digests; recurring invoices e-mailed automatically; a monthly security summary.

Production dashboard — open orders, WIP value, QC queue and shortages.

Plans

Smallholder · **Commercial Farm** · **Agribusiness** — priced per organisation by farm count and modules, with a free trial. Pay by bank transfer or mobile money; onboarding and a 38-page training & technical manual are included.
